

BAN110
Data Preparation and Handling
Assignment 1

Create and submit a SAS Code which, when run, will print the answers to the following questions and output any graphics. Your SAS Code must include a title with your name and student number and comments for each question number.

1. **[50 marks]** The msleep data set contains the sleep times and weights for various mammals.
 - a. Import the csv data into SAS
 - b. Create a new SAS dataset called subset to manipulate the data in the following ways:
 - i. Group according to order and genus
 - ii. Add a new variable for the proportion of REM sleep as a fraction of the total hours of sleep
 - iii. Summarize the average sleep_total, average rem_prop, minimum sleep_total, and maximum sleep_total
 - iv. Filter the data so that the average sleep hours are greater than 5 v. Arrange the data from lowest to highest by average sleep hours
2. **[15 marks]** Export the msleep data set to a SAS dataset called "mammal_sleep"
- **[35 marks]** use proc contents to examine the list of variables. Within a data step, perform the following:
 - keep the output dataset name same as input
 - Rename "brainwt" as Brian_Weight
 - print the first 5 observations in the dataset
 - drop the column "conservation" from the dataset.

Submission Instructions:

- a. The final submission must include your SAS Code as pdf and all outputs.
- b. The file should be named as follow:

Group_#.pdf
